Project Details
-----------------

Project Title : Leave Management System

Project Description : Developed a enterprise application to be utilised by any corporate organization for their employee's leave management. The development process that we followed was agile. The application takes into account the employee details and the allotted leave for an employee based on his role and designation. The application can be used to apply for a half day and full day leave and once the respective manager for the employee has approved the leave, the number of days of leave taken would be reduced for that employee for that financial year.

Technologies used : Java, Spring MVC, Spring AOP, Spring JdbcTemplate, Hibernate, Maven, Git, Spring STS/Eclipse, Junit, MYSQL, AWS for deployment.

Project Title : Organic Shop Application

Project Description : The organic shop application was developed for an individual who wants to sell any organic products such as bread, vegetables, fruits etc online. The application used OAuth2 authentication with Google and displayed all the items in the shop through a front end webpage using bootstrap and css. The application can be used by anyone who would like to buy the organic products online by ordering the respective item and their respective address.

Technologies used : HTML, CSS, Bootstrap4.0, Angular, Firebase for database, authentication, deployment.

IT Skills
-----------

Java EE Web Component APIs : Servlets and JSP

Java EE Business Component : JPA2

Java EE Resource APIs : JDBC, JAX-WS
